Week 3 Meeting Minutes

PLACE AND DATE

On Slack on Friday 16th March 2018.

ATTENDEES

1. Jiexin Li

2. Tianshuo Zhang

3. Xiyu Zhang

4. Christoph Treude

MEETING RECORDINGS

What did we do this week that helped the development team meet the sprint goal?

1. We decided to use AWS as our web service.

2. We have finished to deploy our front-end via AWS.

3. Although we don't have a meeting in the week, and we have also prepared an agenda with a few questions to our supervisor.

-Project details

Question 1: We are required to finish 5 milestones in this semester and you have already given us the goal for the first milestone. Could you help us to setup the other goals for our remaining milestone? It will be good for our Gantt chart. (Xiyu Zhang)

Answer: We need to think about what the content of milestones should be. In other words, creating plannings for our each milestone is the work of a software engineer. In addition, we have already created 7 milestones with specific details for our project, it also includes the milestone during mid-break.

Question 2: We are struggling with using AWS to deploy our front-end, Do we need to view the function of external access to be the important priority? (Xiyu Zhang)

Answer: Yes, the front-end is an very important component of this project, this function should be one of our priorities.

Suggestions from supervisor:

In our report, we would better to mention that why we chose AWS to be the web service. For example, we can mention the justification and do a comparison that the reasons of other services are less suitable than AWS. Moreover, what alternatives did we consider, and which advantages lead us to choose AWS finally?

What will we do next week to help the development team meet the sprint goal?

1. We will finish the function of external access.

2. After that, we will start to use GitHub APIs to implement the login with GitHub account.

3. Preparing some questions and report the project progress in our next meeting

Do we see any impediment that prevents us or the development team from meeting the sprint goal?

1. We are not familiar with how to implement the function of external access.

2. We are still struggling with how can we use the GitHub APIs to implement some required functions.
